2 The model, language, and implementation of an object-oriented multimedia knowledge base management system 77%

 Hiroshi Ishikawa , Fumio Suzuki , Fumihiko Kozakura , Akifumi Makinouchi , Mika Miyagishima , Yoshio Izumida , Masaaki Aoshima , Yasuo Yamane
ACM Transactions on Database Systems (TODS) March 1993
Volume 18 Issue 1

New applications such as CAD, AI, and hypermedia require direct representation and flexible use of complex objects, behavioral knowledge, and multimedia data. To this end, we have devised a knowledge base management system called Jasmine. An object-oriented approach in a programming language also seems promising for use in Jasmine. Jasmine extends the current object-oriented approach and provides the following features. Our object model is based on functional data models and well-established ...

1 Industrial sessions: beyond relational tables: Coordinating 77%

 backup/recovery and data consistency between database and file systems

Suparna Bhattacharya , C. Mohan , Karen W. Brannon , Inderpal Narang , Hui-I Hsiao , Mahadevan Subramanian

Proceedings of the 2002 ACM SIGMOD international conference on Management of data June 2002

Managing a combined store consisting of database data and file data in a robust and consistent manner is a challenge for database systems and content management systems. In such a hybrid system, images, videos, engineering drawings, etc. are stored as files on a file server while meta-data referencing/indexing such files is created and stored in a relational database to take advantage of efficient search. In this paper we describe solutions for two potentially problematic aspects of such a data ...

Complete Search Help and Tips

The following characters have specialized meaning:

| Special Characters | Description |
|--------------------|---|
| , () [| These characters end a text token. |
| = > < ! | These characters end a text token because they signify the start of a field operator. (! is special: != ends a token.) |
| ` @ \Q < { [! | These characters signify the start of a delimited token. These are terminated by the end character associated with the start character. |

m. c. schraefel , Nigel R. Shadbolt , Nicholas Gibbins , Stephen Harris , Hugh Glaser
Proceedings of the 13th international conference on World Wide Web May 2004
 We present a Semantic Web application that we call CS AKTive Space. The application exploits a wide range of semantically heterogeneous and distributed content relating to Computer Science research in the UK. This content is gathered on a continuous basis using a variety of methods including harvesting and scraping as well as adopting a range models for content acquisition. The content currently comprises around ten million RDF triples and we have developed storage, retrieval and maintenance methods ...
